

Making Sense: Extracting Meaning from Text by Matching Terms and Entities to Ontologies and Concepts – Table of Contents

Alianna J. Maren, Ph.D.
Expected Publication: Late 2016

- 1. Introduction**
 - 1.1. Why Text Analysis Is Tough**
 - 1.2. For Maximal Advantage: *How to Use This Book***
- 2. How the Brain Solves Tough Problems**
 - 2.1. Representation Levels – An Artificial Intelligence Idea (Stolen from Brain Science)**
- 3. Smart Brain-Based Strategies for Text Analytics**
 - 3.1. Levels of Processing**
 - 3.2. Connections Between the Levels**

PART I: FOUNDATIONS

- 4. Level 1: Statistical Data Processing**
 - 4.1. Raw Text Processing**
 - 4.2. Entity and Noun Phrase Extraction**
 - 4.3. Mapping Synonyms to Reference Terms**
 - 4.4. Creating Equivalence Classes**
 - 4.5. Creating a Reference Term Vector for a Set of Documents**
- 5. Ontologies and Concept Classes – Observing Something New**
 - 5.1. What an Ontology Is, and Why We Need It (Even for Statistical Data)**
 - 5.2. How to Create Good Ontology Groups**
 - 5.3. Putting Novelty Detection into Practice**
- 6. Feature Vectors for Term-to-Concept Mapping**
 - 6.1. Why Matching Terms to Concepts Is Important**
 - 6.2. High-Level Approach Overview**
 - 6.3. Concept Definition: Flat World versus Structured World (Ontology)**
 - 6.4. Notation and Naming Conventions**
 - 6.5. Process Overview**
 - 6.6. Dimensionality Reduction**
 - 6.7. Formal Method for Matching Terms to Concepts**

6.8.Thinking Through the Coefficient Matrix

6.9.Next Steps: Identifying Novelty
